Amendments to the Specification

JUN 29 2007

Please insert after Paragraph 0026 of the specification the following new paragraph:

--[0026A] In some embodiments, a method or device may include switching a remote unit in communication with a media access controller from a first operating channel to a second operating channel, wherein communication between the remote unit and the media access controller may be substantially undisrupted. The method or device may include transmitting a channel switch request to the remote unit. The method or device may include receiving from the remote unit a communication responsive to the channel switch request. The communication responsive to the channel switch request may be for example a positive reply or a negative reply.--

Please amend the Abstract as follows:

~~--Embodiments of the present invention provide a~~ A method, apparatus and system for multi-channel Basic Service Set (BSS) wireless local area network (WLAN) architecture [[to]] may for example enable switching communication between a media access controller of an access point and a plurality of remote units between multiple channels.--
